FOR IMMEDIATE RELEASE – October 14, 2009

IRON EAGLE TECHNOLOGIES, INC. BRINGING ELECTRIC VEHICLE CHARGING INFRASTRUCTURE TO IOWA

Four charging stations in Elk Horn, Iowa will be the first between Denver and Chicago

Iron Eagle Technologies, along with the Danish Windmill, AmericInn Motels, the Elk Horn Service Station and Carbon Day Automotive are excited to announce their efforts in promoting renewable energy products, energy conservation and carbon output reduction with the installation of four publicly available Electric Vehicle (EV) charging stations.

A ribbon cutting for the charging stations, the first in the state of Iowa, will take place at the Danish Windmill in Elk Horn, Iowa, on November 12 at 2:00 PM. State officials and local business leaders will be speaking about the importance of building EV infrastructure for the future of transportation, and EV manufacturers will be represented, bringing along with them different types of EV's for viewing and rides. The event will be free and open to the public. Refreshments will be provided.

The charging stations will be the first of many along the I-80 corridor through Nebraska and Iowa as Iron Eagle Technologies looks to expand and build infrastructure for the EV movement. They are a compliment to Iron Eagle Technologies' new World EVAL program, which is a new line of business for testing and certification of electric vehicles and EV components.

The ChargePoint™ Networked Charging Stations allow customers to simply swipe a keyfob, plug in and charge up their electric vehicles. Users may locate the charging stations, and even determine whether or not they are currently occupied using Google™ maps.

President and CEO of IET, Mike Howard noted, "Although it's not well known, the first successful electric vehicle was actually invented in Iowa by William Morrison. We've come a long way since then, and Iron Eagle Technologies is committed to putting the EV focus back in the heartland."

About Iron Eagle Technologies, Inc. – IET, along with established world class calibration companies World Cal, Inc. and Liberty Labs, Inc., and also with Liberty Auto Restoration, Inc. offers testing and certification services for renewable energy products. In addition to safety and compliance testing for PV solar products and electric vehicles, long term reliability testing for solar arrays and EV fleets, IET also provides EV conversions and solar array design and installation services for commercial and residential applications.
